

SECTOR ONE-PAGER

Education: make official documents verifiable.

Docseal helps issuers and verifiers reduce document fraud in education workflows by comparing the received file with the sealed official reference.

Documents concerned

Diplomas, certificates, transcripts, training credentials.

Typical fraud

Fake diplomas, modified grades, reused certificates.

Who verifies

Employers, universities, public bodies and credential platforms.

Docseal value

Verify that an academic credential corresponds to the issuing institution.

Verification model

1

Seal

Issuer creates a seal and registry status.

2

Share

Recipient shares the document with a third party.

3

Verify

Verifier checks file hash against the sealed reference.

Pilot idea: Seal sample credentials and expose a third-party verification flow.

Why now?

Document fraud is increasingly hard to detect once files leave the issuer. Docseal adds an independent authenticity check without forcing the issuer to expose sensitive content.

Entry point

Start with one document family, one issuer and one verification workflow. Use a 4-6 week controlled pilot to measure fraud detection and operational fit.
