# HR & Payroll: make official documents verifiable.

Docseal helps issuers and verifiers reduce document fraud in hr & payroll workflows by comparing the received file with the sealed official reference.

## Documents concerned

Payslips, employer certificates, income attestations.

## Typical fraud

Edited salary amounts, fake employer letters, modified employment dates.

## Who verifies

Landlords, banks, recruiters, administrations and onboarding teams.

## Docseal value

Let a verifier confirm that a payroll document corresponds to the issuer record.

## Verification model

1

### Seal

Issuer creates a seal and registry status.

2

### Share

Recipient shares the document with a third party.

3

### Verify

Verifier checks file hash against the sealed reference.

**Pilot idea:** Seal payslips or employer certificates for one customer cohort.

## Why now?

Document fraud is increasingly hard to detect once files leave the issuer. Docseal adds an independent authenticity check without forcing the issuer to expose sensitive content.

## Entry point

Start with one document family, one issuer and one verification workflow. Use a 4-6 week controlled pilot to measure fraud detection and operational fit.
